[Scaglietti's original 250 GTO wireframe heads to auction](#)

Lead

On 21 March, an intricate wireframe around which Scaglietti perfected the legendary lines of the Ferrari 250 GTO will be sold at auction in Lyon...

The jig - bought directly from [Ferrari](#) by its current owner in the 1980s - is one of the two produced in period by Scaglietti, used as a reference point for the GTO's sumptuous aluminium bodywork. With the other being retained by Ferrari, and currently on show in the Modena museum, it represents a unique opportunity to acquire what is possibly the ultimate collectable for the high-end Ferrari enthusiast. Of course, it could be used as a template for a faithful recreation, but considering its beauty - and the estimate of €100,000 to €150,000 - it's more likely to be employed as a work of art in its own right. [Scaglietti's Ferrari 250 GTO wireframe](#) will be sold at [Aguttes' auction in Lyon on 21 March](#).
