## [Immerse yourself in the world's most luxurious simulation experience](#)

### Lead

Seeking to blur the line between reality and the virtual world, design-led simulator creators Levitty have the perfect product to fill those quiet, gloomy days where you want to take your dream car for a drive, without leaving your home!

If you were to dust off your PlayStation 2 and fire up a copy of Gran Turismo 3 A-Spec (the franchise's best version in our humble opinion), the now 22-year-old game may not be quite as realistic as you remembered back in its wonder years. As technology advances at an ever-increasingly alarming rate, the level of detail, immersion and realism seems to know no bounds when it comes to gaming, and for us motorsport lovers, we're treated to some of the very best.

While the consoles, and in turn, the graphics seem to be evolving at Bugatti-esk speeds, so too are the immersion levels, and Levitty might have just cracked the code of bringing unrivalled luxury with state-of-the-art technology. Now a prominent name in the world of racing simulation, the brand's all-new Levitty One takes inspiration from the world of motorsports, resulting in a product that encapsulates the passion, drama, and excitement around racing.

With performance at its heart, the Levitty One boasts styling cues and refinement that rival that of some of the world's most expensive hypercars. Its handcrafted shape, created with an unwavering focus on intricate details, utilises premium materials like carbon fibre, leather, and Alcantara. The result is a racing simulator that is truly unlike anything you've ever seen before, one that is as aesthetically pleasing as it is robust and powerful.

Perhaps the Levitty One's coolest feature, though, comes in the form of its tailoring options. While even the base version looks simply breath-taking, the design team offers an extensive array of options, allowing you to create a centerpiece out of the simulator, perfect for the ultimate car enthusiast's hideout!

With innovation at its core, this sim-rig draws information from Levitty's extensive knowledge of supercar design and engineering, allowing the hardware to include a meticulously crafted hydraulic pedal box, a top-tier direct-drive steering system, integrated surround sound, and a haptic feedback setup that engrosses users in the heart of the racing action at every moment.

More information about the [Levitty One can be found via their website.](#)
